

**ASSURED**SCIENCE  
A non-profit organization

Dear Visitor,

Over the last 400 years scientific research has provided the most benefits to our society. Yet today, ignoring the evidence all around us, we are dropping the ball on scientific research and squandering its immense potential to deliver far more benefits to our lives and environment.

The basic reason is that we are using an antiquated system for funding and data assessment that is ill suited for today's volume, diversity, and complexity of the scientific research enterprise. Low levels of funding is also forcing funding agencies to increasingly rely on non-data based criteria for awarding grants that is only worsening the data problems. This situation is not only unacceptable but also completely unwarranted.

We at Assured Science have designed a modern system using advanced and well tested methods (patent-pending) that would (1) enhance by 3-4 fold the performance of all entities (funding agencies, scientists, institutions, commercial companies, and service organizations), (2) serve as the economic powerhouse for maximizing business or career opportunities for all, (3) enable effective collaborations for solving local, national, or global problems, (4) support ALL scientifically sound research projects for accessing maximum benefits, and (5) attract the maximum number of students every year to careers in science - with the money already available for scientific research.

*Please join us and help make scientific research **most effective, efficient, resourceful, nimble, autonomous, and limitless.***

Our goal is single and simple: change the funding model for most routine research to the one we have designed to yield the best data possible in every scientific field - basic and applied – while also enabling scientists to self-sustain their careers on their own terms and all others to participate or benefit from the scientific discovery process.

At this juncture, we are focused on raising funds and other resources for translating the Assured Science concept into a fully operational research system. Our approach is to form committed partnerships with organizations or individuals who share our vision and goals. The first goal is to generate a proof-of-concept Assured Science electronic platform the full-scale version of which would be the ultimate adaptive entrepreneurial science engine for modernizing the way (1) research projects are funded and conducted and (2) scientific data are generated, purposed, and archived.

Please see [The Flier](#) for a summary of benefits of the Assured Science System for scientific research and go through our website for more information. If you like to become involved by providing funds or help in some other manner, please contact us for more details about how Assured Science System works and for discussing how we can work together.

Thank you very much.

The Founding Team
