

# WOLFRAM

To whom it may concern:

On behalf of Wolfram Research, I am pleased to write this letter in support of Assured Science, Inc.

Assured Science is developing a new ecosystem for scientific research. Scientists will be able to self-sustain a career conducting research on any subject and collectively produce the best data – every dataset in every field automatically validated in different contexts and integrated with related data by peers.

Assured Science has the goal of developing into an operational non-profit research ecosystem in the US by forging partnerships with (1) private philanthropic agencies (2) technology agencies for building the resourceful electronic infrastructure that serves as the engine for the whole system, and (3) other facilitators for building the remaining components of the new research system. Once the ecosystem is fully developed, the goal is to export the technology to partners in other countries for setting up autonomous units outside the US.

Wolfram Research is a long-standing leader in technical innovation and computational software. The purpose of the Wolfram Technology Stack is to transform and organize objective data to provide a source that can be relied on by everyone for definitive answers. Wolfram Research is the creator of Mathematica, the Wolfram Cloud, and Wolfram|Alpha.

Once Assured Science has secured necessary funding and is ready to build the technical infrastructure for this project, Wolfram Research anticipates participating in this process by offering advice based on its experience in generating, managing, and presenting computable data. Wolfram Research is also potentially prepared to support the development phase of the proposed platform by providing licenses to the relevant technology. We look forward to the opportunity to work with Assured Science, Inc.

Sincerely,

Ishwarya Vardhani

Wolfram Partnerships, Wolfram Research
